Detailed Action

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35
 U.S.C. 102 that form the basis for the rejections under this section made in this

Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

 Claims 1,2,10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Pritchard (2,133,831).

The Pritchard reference discloses a dispensing circuit consisting of a pump means (fig. 3,19) which consists of bellows pump (19); having a variable-volume chamber with at least one flexible wall (19), at least one nozzle (35), a output duct (fig. 3)¹, a delivery duct (32), a first one-way valve (27,28), a second-way valve (37,38), wherein at least one of the one-way valves has a hollow body (fig. 3, 38,37) and a abutment surface (fig. 3) and a resilient means (37); a closure members for the first one-way valve and second one-way valve (28,38), a main body (18), a reservoir (10), a control system (26,22,23,13,19) and all the functional language limitations.

Claim Rejections - 35 USC § 103

 The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action: Art Unit: 3754

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

 Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pritchard in view of Zoll (3.800.825).

The Pritchard reference discloses substantially all the structure and functionality of the invention; however the Pritchard reference lacks at least one of the one-way valves having a knife-edge element.

The Zoll reference teaches a one-way valve (100) having a filter (18,40,42), a knife-edge element (128) on the valve housing for the purpose of bearing against a flat abutment (130) for sealing.

Therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to have reasonably modified one of the valves in the Pritchard's device with a knife-edge element as taught by Zoll to in order to provide a convenient and effective way to construct a tight seal along with the use of a sealing gasket.

 Claims 7-9 are rejected under 35 U.S.C, 103(a) as being unpatentable over Pritchard in view of Zoll (3,800,825) and Halsnes et al. (5,785,085).

The Pritchard and Zoll references disclose substantially all the structure and functionality of the invention; however the both references lack a third valve and closure member.

¹ Please refer to Appendix A for specified feature(s).

Application/Control Number: 10/522,893

Art Unit: 3754

The Halsnes reference teaches a dispensing apparatus having an inlet end (6) with a third valve (6') and closure member (6', fig.1) for the purpose of allowing flow of liquid toward the reservoir.

Therefore it would have been obvious to one having ordinary skill in the art at the time of the invention to have reasonably modified the Pritchard and Zoll devices and third valve and closure member as taught by Halsnes in order to prevent in backflow from the strainer that would present contaminates in the reservoir.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Meckenstock (4,858,788), Udall (4,515,294), Moore (1,928,070), Lam (2005/0121643), Auer (2001/0025860), Serre (2,081,253), Crippen et al. (3,455,486), and Smith et al. (2,792,974) are other various types of dispensers having two valves, a pump, and a flexible wall.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephanie E. Tyler whose telephone number is 571-272-8059. The examiner can normally be reached on 8:00am-4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Shaver can be reached on 571-272-4720. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
